

The Herschel Under Pew heater is the latest addition to our highly popular and bespoke Heritage range of infrared heaters, transforming the conventional approach to under pew heating in churches. Designed and manufactured in our UK Production Facility, the Under Pew heater offers efficient and sustainable comfort, under pews, where additional top-up warmth is required. Unlike traditional under pew heaters that use convection to circulate warm air, Herschel's Under Pew heaters convert electricity to produce a gentle waveband of far infrared heat. The infrared heat radiates from the surface of the panel, travels through the air and directly warms all surfaces and objects. The Herschel panel will heat the floor, feet and legs of the congregation and create a warm "bubble" of gentle localised heat.

Equipped with our smart push-button controls for pew by pew timer control, along with centralised App and remote functionality, the Herschel Under Pew heating system is the ideal solution to complement the suspended Herschel Halo and wall-mounted Halo Horizon heating range where additional, localised heating is required during services. Manufactured in Britain to the highest standards, the Under Pew heater includes a beautifully ornate grill designed to allow the infrared heat to pass through from the heater whilst remaining cool to the touch. This feature makes it perfectly safe for under pew areas within churches.

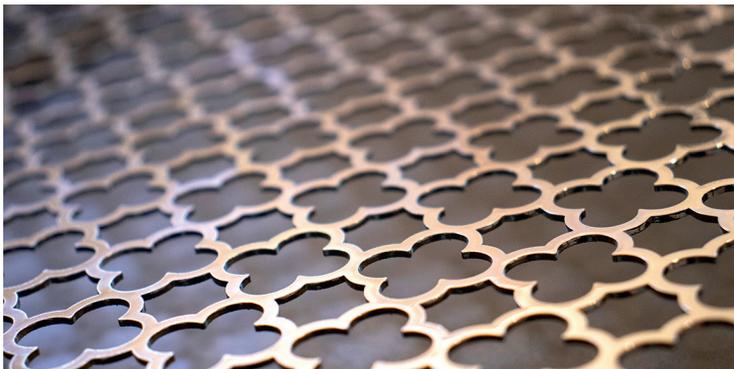

The Under Pew heater complies with IEC60675 for radiant efficiency, the inclusion of Herschel's Swift Comfort Plus technology, including our long life German made heating element, ensures high performance and efficiency. The Under Pew heater is suitable for various installation and mounting methods, including underneath the pew, at the back of pews, or freestanding. Contact our Heritage team for more information on how the Under Pew heaters can be tailored for installation in your church. The Under Pew heater comes with a 10 year warranty.

Available Models

Model Number	Dimensions	Weight	Power	Heated Area*
HUP-250	60 x 30 cm	5 kg	250 W	n/a
HUP-450	120 x 30 cm	10 kg	450 W	n/a

Technical Details

Surface	Steel Sheet, powder coated
Colour	Bronze (with zinc-plated grill)
Rear Panel	Sheet Steel, powder coated
Surface Temperature	Safety grill ensures cool to touch
Voltage	220 - 240V 50/60Hz
Protection Class	IP44
Cable	1.8m
Installation	Pew mounting (underside or back) or freestanding
Certificates	  
Warranty	10 years

Important

The Under Pew heaters can be mounted to the underside or back of the pew. Alternatively, the heater can also be used as a freestanding heater under pews. The Under Pew heater will need to be wired into the mains and this should be carried out by a suitably qualified electrician. Always refer to installation instructions before installation.
